OFFICIAL DOCUMENTATION & OPERATIONAL MANUAL

DigiLoyalty Pro

Complete 3-Phase Operational Guide & Running Manual

Platform: Digital Loyalty & Reseller Engine • **Database:** Turnkey SQLite • **Server:** PHP 8.3 Native

1. The 3-Phase Lifecycle Overview

DigiLoyalty Pro is structured into three clean, interconnected operational phases designed to onboard local retail businesses and turn first-time visitors into loyal repeat customers.

PHASE 1: MASTER ADMIN

You (The Agency Reseller)

Owns the platform, onboards local business owners, manages client subscription plans, and collects SaaS revenue.

PHASE 2: BUSINESS OWNER

Store Merchant (Your Client)

Logs into their portal, builds their loyalty card, enrolls customers, tracks Repeat Visit Rate, and operates the billing terminal.

PHASE 3: CUSTOMER

The Shopper / Diner

Logs in with mobile number to an account already created by the store. Collects stamps, earns coins, and redeems rewards.

💡 **The Core Loyalty Philosophy:** In retail and dining, a customer who visits once is just an acquisition. Loyalty begins the exact moment they return for their **1st repeat visit (Visit #2)**. The system automatically marks customers who visit > 1 time as **Repeat Customers** and tracks this as the primary business health KPI.

2. Quick Start & Server Launch

The project is fully self-contained with SQLite and requires **zero external database setup, zero passwords, and zero configuration**.

1. **Double-Click the Launcher:** Open your project folder and double-click `run.bat`.
2. **Manual Terminal Command:** Alternatively, in PowerShell run:
   `php -d extension=pdo_sqlite -S 127.0.0.1:8000 -t public`
3. **Open Browser:** Visit `http://localhost:8000`. The application is immediately live.

3. Phase 1: Master Admin (You as the Reseller)

As the Master Admin, you operate the white-label agency control center to onboard merchants and manage subscriptions.

A. Master Admin Setup & Login

- **URL:** `http://localhost:8000/admin/login`
- **Initial Setup:** If launching for the first time, the portal automatically presents the **"Create Master Admin"** setup screen. Enter your Agency Name, Your Name, Admin Email, and Admin Password.
- **Login:** On subsequent visits, enter your registered email and password to access the Reseller Console.

B. Onboarding a Client Business (Selling Your Service)

When you close a sale with a local cafe, salon, or store, you onboard them directly from your console:

1. Click the blue **"+ Onboard New Merchant"** button in the top navigation.
2. **Fill Store Details:**
   - **Business Name:** e.g. *Royal Brew Cafe*
   - **Category:** Restaurant & Cafe, Salon & Spa, Retail Boutique, Gym, etc.
   - **Owner Name & Phone:** The business owner's contact info.
   - **Owner Login Email & Password:** The credentials the store owner will use to access their dashboard.
   - **Subscription Plan:** Choose 30 Days (Trial), 90 Days, Annual (365 Days), or Lifetime VIP.
   - **Stamp Target & Reward:** e.g. 8 Stamps = *Free Gourmet Coffee / ₹150 Off*.
3. Click **"Create & Deliver Credentials"**. The merchant is created instantly.

C. Managing Client Subscriptions

Action	How It Works	Purpose
+30 Days Plan	1-click button in client table	Extends the merchant's plan validity when they pay monthly/annual fees.
Suspend / Activate	Toggle switch	Suspends merchant access if their subscription payment is overdue.
Owner Portal	1-click quick access link	Instantly logs you in as that business owner to assist them or view their stats.

4. Phase 2: Business Owner (Store Merchant)

The business owner logs in to configure their digital loyalty card, enroll customers, and manage checkouts.

A. Owner Login & Dashboard

- **URL:** `http://localhost:8000/login`
- **Credentials:** Owner Email and Password created by Admin in Phase 1.

- **Dashboard KPIs:** Displays Repeat Visit Rate (%), Total Customers, Visits This Week, and Coins Issued.

B. Visual Card Builder & Standee

- **Card Settings:** `/owner/card-settings` — Customize primary/secondary brand colors, stamp count (e.g. 6, 8, 10 stamps), reward title, and coin earning rate.
- **Print Counter Standee:** `/owner/standee` — Generates a print-ready table tent card with the store's unique QR code to display on billing counters.

5. How Business Owners Add Customers (1st Visit)

When a customer visits the store for the first time, the owner or cashier enrolls them using either of two methods:

Method A: Cashier Speed Terminal (During Checkout — 3 Seconds)

1. Open the **Cashier Terminal** at `http://localhost:8000/staff/terminal`.
2. Type the customer's 10-digit mobile number on the keypad and click **"Search Customer"**.
3. If new, enter their name (e.g. *"Ananya"*), input the bill amount (optional), and click **"+1 Visit Stamp & Credit Coins"**.
4. **Result:** Account is created, Visit #1 is stamped, and welcome coins are awarded with confetti animation.

Method B: Owner Dashboard (Customer CRM)

1. Go to `/owner/customers` and click **"+ Enroll New Customer"**.
2. Enter Customer Mobile (10 digits), Full Name, Email (optional), and Welcome Reward Coins (default 20).
3. Click **"Enroll & Create Card"**. The customer profile is immediately active.

6. Phase 3: Customer Login & Loyalty Pass

The customer logs into the account **already created for them by the owner** with zero app downloads.

1. **Access Link:** Customer scans the store counter QR standee or opens `http://localhost:8000/card/{slug}`.
2. **1-Step Sign In:** Enters their 10-digit mobile number.
3. **Live Digital Pass Display:** The system recognizes their account created by the owner and displays:
   - **Apple Wallet Card:** Branded header with store logo, customer name, and tier status.
   - **Stamp Punch Circles:** Dashed circles showing filled stars for stamps earned and a gold gift icon for the final goal.
   - **Reward Coins Wallet:** Live coin balance with real Rupee value equivalent.
   - **Personal QR Code:** Dynamic QR code for the cashier to scan during counter checkout.
   - **WhatsApp Share Link:** 1-click button to share referral pass with friends.

7. The Reward Redemption Process

The system provides two redemption mechanisms to reward customer loyalty:

Type 1: Milestone Stamp Reward (e.g. Free Item after 8 Stamps)

Workflow:

1. Customer visits store and completes their required stamps (e.g. 8th stamp).
2. A unique alphanumeric voucher code (e.g. `RW-8D4F2A`) is automatically generated in their pass under **"Claimed Vouchers"**.
3. On their next visit, the customer shows the voucher code to the cashier.
4. The cashier looks up the customer in the terminal and clicks **"Redeem Voucher"**.
5. The system marks the voucher as Redeemed with a timestamp, preventing reuse.

Type 2: Reward Coin Bill Discount (Spend Cashback)

Workflow:

1. Customer accumulates coins on every purchase (e.g. 1 coin per ₹10 spent).
2. At checkout, customer requests to use their coins: *"Redeem 50 coins for a discount."*
3. In the Cashier Terminal under **"Redeem Coins for Bill Discount"**, cashier enters `50` and clicks **"Apply Discount"**.
4. 50 coins are debited from the customer's wallet, and the discount equivalent (e.g. ₹25.00) is deducted from the final bill.

8. Complete URL & Role Reference Sheet

Phase / Role	URL Path	Default Access	Key Capabilities
Phase 1: Master Admin	`/admin/login`	Configured on 1st visit	Onboard merchants, set subscriptions, extend plans, white-label branding.
Phase 2: Business Owner	`/login`	Set by Admin in Phase 1	Card visual builder, customer CRM, repeat visit KPI, printable standee.
Phase 2: Cashier Terminal	`/staff/login`	Staff Email + PIN 1234	Fast 3-second counter lookup, punch stamps, credit coins, redeem vouchers.
Phase 3: Customer Card	`/card/{slug}`	10-digit mobile number	View punch stamps, live coins balance, personal QR code, claimed vouchers.
System Setup	`/install`	Automated turnkey	Self-contained SQLite database initialization.
